This novel polypeptidede, designated Apo-2 ligand inhibitor (Apo-2LI), can be used to inhibit apoptosis for therapeutic purposes. Its amino acid sequence was deduced from a human thymus cDNA clone (see AAT91179) and is identical to amino acid residues 1-181 of another novel apoptosis polypeptide, Apo-3 (see AAW26709). It may be a soluble, truncated of

              the transmembrane and cytoplasmic sequences of Apo-3. Apo-2LI can be produced in host cells using a claimed method. Chimeric polypeptides comprising Apo-2LI fused to a heterologous amino acid sequence, and an Apo-2LI dimer are also claimed. Apo-2LI can be used to inhibit mammalian cell apoptosis in vivo or ex vivo, and in quantitative diagnostic assays
                                                                                                                                                                                                                                                               9

C-Jun-amino-terminal kinase (JNK) activation. The anti-Apo-2 ligand inhibitor is useful in therapeutic purposes for activating or stimulating apoptosis in cancer cells and may be used to block excessive apoptosis (for example in neurodegenerative disease), or to block potential autoimmune/inflammatory effects of Apo-3 resulting from nuclear factor (NF)-kappaB activation or C-Jun-amino-terminal kinase (JNK) activation. The antibody may also be used in diagnostic assays for Apo-2LI or Apo-3, e.g. detecting Apo-2LI or Apo-3 expression in specific cells, tissues or serum, or for affinity purification of Apo-2LI or Apo-3 from recombinant cell culture or natural sources. The present sequence represents the human Apo-2 ligand inhibitor protein (Apo2-LI) which was used to generate the antibody of the invention

The invention relates to an new isolated biologically active Apo-2LI or Apo-3 having at least 80 % sequence identity with native sequence Apo-2LI or Apo-3 appearing as ABU08251 and ABU08252. Also included are a confinearic molecule comprising the Apo-2LI fused to a heterologous amino acid sequence; a dimer molecule comprising a first Apo-2LI and a second Apo-2LI, an antibody that binds to Apo-2LI or Apo-3 for to its certracellular domain sequence), an isolated nucleic acid encoding Apo-2LI or Apo-3, a vector comprising the nucleic acid, a host cell comprising the vector, a method of producing Apo-2LI and a non-human (transgenic or Apo-3, a vector comprising the nucleic acid, a host cell comprising the vector, a method of producing Apo-2LI and a non-human (transgenic or knockut) animal that contains cells that express nucleic acid encoding Apo-3 or cells having an altered gene encoding Apo-3. Apo-2LI or Apo-3 or cells having an altered gene encoding Apo-3. Apo-2LI or Apo-3 or cells having an altered gene encoding Apo-2LI or Apo-3 or cells having an altered gene encoding Apo-2LI or Apo-3 or cells having an altered gene encoding Apo-3. Apo-2LI or Apo-3 or cells having an altered gene encoding Apo-3. Apo-2LI or Apo-3 or cells having an altered gene encoding Apo-3 or cells having anyotrophic lateral sclerosis, multiple sclerosis, reinitis pigmentosa, aplastic anamia, cerebellar degeneration, myocardial infarction, reperfusion injury and toxin-induced liver myocardial infarction, reperfusion injury and toxin-induced liver also useful for preparing a composition for treating cancer. The present sequence represents Apo-2LI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "N-glycosylated. The invention relates to an Apo-3 polypeptide having an extracellular domain (BCD) sequence and a death domain sequence. The Apo-3 polypeptide command to stimulate or induce apoptotic activity in mammalian cells. Human Apo-3 exhibits similarities to the tumour necrosis factor receptor (TNFR) family of polypeptides. The invention also relates to a chimeric molecule comprising an extracellular domain sequence comprising residues 1-198 of Apo-3 fused to a heterologous maino acid sequence. The CC conditions such as cancer, lugus, and herpes virus infection. Increased levels of apoptosis are associated with diseases such as acquired conditions such as cancer, lugus, and herpes virus infection. Increased levels of apoptosis are associated with diseases such as acquired immunodeficiency syndrome (AIDS), Alzheimer's disease, parkinson's cimenses, amyotrophic lateral sclerosis, multiple sclerosis, retinitis pigmentosa, cerebellar degeneration, aplastic anaemia, myocardial cinearction, stroke, reperfusion injury, and toxin-induced liver disease.

The Apo-3 polypeptide is also useful in non-therapeutic applications such as in quantitative diagnostic assays as a control against which samples containing unknown quantities of Apo-3 may be prepared, in generating antibodies, as standards in assays for Apo-3 in affinity purification containing unknown quantitically to inhibit apoptosis or nuclear factor shaps B (NF-kappa B) induction, or as an immunogen for producing anti-chappa B induction, or as an immunogen for producing anti-chappas. The chappas B induction, or as an immunogen for producing anti-chappa-3 polypeptides. The present sequence represents the human Apo-2 ligand inhibitor protein which comprises amino acid residues in to 181 of the human Apo-3 protein. It is believed that Apo-2 ligand inhibitor protein which compared form of Apo-3 cigand inhibitor protein which expendence represents the human Apo-2 ligand inhibitor protein which cepter and the apole and the Apo-3 polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CTEPCGNSTCLVCPQDTFLAWENHHNSECARCQACDEQASQVALENCSAVADTRCGCKPG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                  polypeptides are useful for stimulating or inducing apoptotic activity in mammalian cells e.g. cancer cells, or for in vivo or ex vivo gene therapy rechniques. The Apo-3 chimeric molecules are useful for inhibiting apoptosis, or as immunogens used in generating antibodies. The antagonistic antibodies may be used to block excessive apoptosis, for instance in neurodegenerative disease, or to block potential autoimmune/inflammatory effects of Apo-3 resulting from NP-kappas activation. The nucleic acid sequences are useful as diagnostics for tissue-specific typing, for preparing Apo-3 polypeptides, or for generating transgenic or knockout animals. The transgenic or knockout animals are useful in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the isolation of a biologically active Apo-2 ligand inhibitor (Apo-2LI) or Apo-3, and the polymucleotide sequences encoding them. Apo-2LI and Apo-3 are involved in apoptosis. The Apo-2LI and Apo-3 polypeptides are useful in diagnostic assays. Apo-2LI is useful for generating antibodies, as standards in assays for Apo-2LI, in affinity purification techniques, and in competitive-type receptor binding assays when labelled with radioiodine, enzymes or fluorophores. Agonistic Apo-3 antibodies are useful for stimulating or inducing apoptosis in cancer cells, and thus have therapeutic utility. The present sequence represents human Apo-2LI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CTEPCGNSTCLVCPQDTFLAWENHHNSECARCQACDEQASQVALENCSAVADTRCGCKPG 120

ABR62365

```
This is the protein sequence of a mutated extracellular domain of the p55 tumour necrosis factor receptor (TNFTED) in which a Pro residue substitutes the native His-34 residue (residue 23 in the present sequence) and an Ile residue substitutes the native Ser-57 residue (residue 46 of the present sequence). Screening of TNFTED mutant clones using a yeast display system yielded a clone that showed a higher expression level in yeast than did a wild-type TNFTED clone. The encoded polypeptide contained these 2 amino acid substitutions. The introduction of proline residues may assist the polypeptide to adopt a favourable conformation that fixes the neighbouring cysteine residue into the correct orientation for disulfide bond formation, resulting in a higher invention therefore provides methods of increasing protein expression levels by substituting an amino acid residue with proline, where the substitution occurs within 15 (preferably within 10, and especially within 5) amino acids of a cysteine residue. Note: The present sequence is not shown in the specification but is derived from the TNFTED sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    156

human tumour necrosis factor (TNP) receptor related protein TR2. Included human tumour necrosis factor (TNP) receptor related protein TR2. Included to the the two splice variants of TR2. TR2-SY1 and TR2-SY2.

The TR2 gene is located on chromosome 1 at position p36.2-p36.3. TR2 is a conservation of the TNPR superfamily. The invention includes a method for the treatment of arthritis or inflammation using an antibody directed against a fragment of the TNPR superfamily. The invention includes a method for the transportance of the TNPR superfamily. The invention includes a method for the transportance of transportance of the TNPR superfamily. The invention includes a method for the artipodies exhibit cytostatic, dermatological, antianaemic, antializergic, antiathmatic, antializergic, antiathmatic, antianaemic, antializergic, antiathmatic, antianatory, neuroprotective, nootropic, antianaemic, antianiflammatory, neuroprotective, nootropic, antianaemic, antianiflammatory, neuroprotective, antiathmatic, antianiflammatory, neuroprotective, antiathmatory activity. The methods are useful for treating arthritis or immunodeficiency or for enhancing an in vivo leukocyte response to an antigen. Anti-TR2 antibodies are useful for treating, inhibiting or preventing autoimmune diseases (such as autoimmune haemolytic anaemia, dermatitis, allergic encephalomyellitis, rheumatoid arthritis, asthma, and cor morphalomyellitis, theumatoid arthritis, asthma, and inflammatory myopathies) and immunodeficiency disorders (such as severely combined immunodeficiency (SCID) x linked, B coll lymphoproliferative disorder, or Nezelof syndrone-combined immunodeficiency with Igs). TR2-SV2 polymucleotides and polypeptides, agonists or antagonists are useful for treating or preventing autoimmune diseases and inhibit the growth, progression and/or metastasis of cancers. They are also used to activate, differentiate or proliferate cancerous cells or tissues, and can be used to treat diseases associated with increased cell survival, or the inhibition of 
                                                                                                                                                                                                Tumour necrosis factor-receptor related protein; TR2; human; cancer; chromosome p36.2-p36.3; arthritis; inflammation; autoimmune disease; immunodeficiency; metastasis; haemolytic anaemia; asthma; X-linked SCID; severely combined immunodeficiency; apoptosis inhibition; Alzheimer's disease; Parkinson's disease; Crohn's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acid molecule encoding a human tumor necrosis factor receptor 2 and its two splice variants, useful for treating arthritis or inflammation, cancer (such as follicular lymphomas) and immunodeficiency
                                                                                                                                                          Tumour necrosis factor receptor (TNFR) domain of TNFR-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure, Fig 16, 373pp, English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of a biologically active Apo-2 ligand inhibitor (Apo-2LI) or Apo-3, and the polyuncleotide sequences encoding them. Apo-2LI and Apo-3 are involved in apoptosis. The Apo-2LI and Apo-3 polypeptides are useful in diagnostic assays. Apo-2LI is useful for generating antibodies, as standards in assays for Apo-2LI in affinity purification techniques, and in competitive-type receptor binding assays when labelled with radioidodine, enzymes or fluorophores. Agonistic Apo-3 antibodies are useful for stimulating or fluorophores in cancer cells, and thus have therapeutic utility. The present sequence represents the extracellular region of a human TNF receptor family protein. This sequence is compared with the extracellular

inducing molecule II, AIM II, appearing as ADL17690 or a procein whose sequence comprises a fragment of amino acid residues 68-240, where the fragment comprises at least lot a so amino acid residues. Also included are a hybridoma that produces the antibody, a method of detecting in a biological sample a protein that binds the antibody or its portion, a composition comprising the antibody and a carrier and an isolated cell that produces the antibody and a carrier and an isolated cell necrosis ligand superfamily and has been shown to bind lymphotoxin-beta receptor and TR6 (TRAIL receptor 6). The antibody is useful for preparing a composition for treating e.g., lymphadenopathy, aberrant bone development, autoimmune disease, graft-versus-host disease, rheumatoid arthritis, osteoarthritis or cancer (many other diseases and conditions are listed in the specification). The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       156

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 154 AA;
```

```
New ethylene! glycolated polypeptide(s) with improved pharmacokinetic properties - for treating e.g. TNF and IL-1 mediated diseases, e.g. adult respiratory distress syndrome, rheumatoid arthritis, septic shock etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SQVALENCSAVADTRCGCKPGWFVEC---QVSQCVSSSPFYCQPCLDCGALHRHTRLLCS 156
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       70 GQVEISSCTVDRDTVCGCRKNQYRHYWSENLFQC----FNCSLCLN-GTVH----LSCQ 119
                                                                                                                                                                                        This invention describes novel polynucleotide sequences encoding tumour necrosis factor (TNF) receptor (TNF-R) or TNF binding protein (TNF-BP). The products of the invention are useful in pharmaceutical compositions for prophylaxis or treatment of human tumnours and to understand the mechanisms of TNF action. This sequence represents a fragment of the TNF-BP described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                 40 HKKIGLFCCRGCPAGHYLKAPCTEPCGNSTCLVCPQDTFLAWENHHNSECARCQACDEQA 99

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                   The invention relates to apoptosis inducing molecule II (AIM II), a TNF (tumour necrosis factor)-ligand superfamily member and its corresponding nucleic acid sequence. The invention is useful for preventing, treating, ameliorating, diagnosing or prognosing graft versus host disease, treating, immunodeficiency, cancer, autoimmune diseases such as multiple sclerosis, type I diabetes, rheumatoid arthritis, primary biliary cirrhosis, aplastic anaemia, myelodysplasia, systemic lupus erythematosus and idiopathic thrombocytopenic purpura. It is useful for screening or identifying compounds capable of enhancing or inhibiting cellular sesponse induced by AIM II, for inhibiting, blocking or reducing T-cell activation. AIM II is useful as a molecular weight marker on SDS-PAGE gels or on gel filtration columns. The present sequence is a cysteinerich motif of human TNF receptor (TNFR) family member.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        68 GQVEISSCTVDRDTVCGCRKNQYRHYMSENLFQC----FNCSLCLN-GTVH----LSCQ 117
                                                                                                                                                     Isolated apoptosis inducing molecule II polypeptide, useful for treating, preventing, ameliorating, diagnosing or prognosing autoimmune diseases such as multiple sclerosis, rheumatoid arthritis, aplastic anemia.

                                           contain at least one non-native cystein residue, pref. at positions 1, 194, 105, 111 and/or 165. The non-native cysteine is joined to a non-peptidic polymer, pref. monomethoxy PGG via thio-ether bonds. Two such TNF inhibitor mols. may be linked via this on-peptidic spacer. The modified polypeptides show improved pharmokinetic properties, i.e. increased mol. wt. hence reduced clearance rate following s.c. or systemic administration, increased sol. of native TNF inhibitors, and reduced antigenicity. The polypeptides may be used for treatment of TNF mediated diseases such as adult respiratory distress syndrome, pulmonary fibrosis, rheumatoid arthritis, inflammatory bowel disease and septic shock. The same method may be applied to the interleukin-1 receptor antagonist IL-1ra. See also AAR27495. (Updated on 25-MAR-2003 to correct

                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2, Application US/09326394

Patent No. 6306820

GENERAL INFORMATION:
APPLICANT: Bendele, Alison M.
APPLICANT: Sennello, Regina M.
APPLICANT: Genarid, Carl K.
TITLE OF INVENTION: COMBINATION THERAPY USING A TNF BINDING
TITLE OF INVENTION: PROTEIN FOR TREATING TNF-MEDIATED DISEASES
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: Amgen Inc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match 17.7%; Score 200.5; DB 3; Length 161; Best Local Similarity 29.8%; Pred.
